

# Independent product and project testing

- Highly skilled, Australia based test engineers
- Broad technology capabilities
- Collaborative, pragmatic and innovative approach
- Passionate about testing
- Flexible and adaptable to suit different software

## Experienced specialist practitioners

At Encompass we believe that testing is an integral part of the Development process. Development methodologies and technologies change over time but the goal of delivering good software remains constant.

Our test consultants have a wealth of experience and can tailor test processes to suit your development methodology and organisational culture.

## Outsourced product testing

We earn the respect of development teams through a combination of our professionalism, the level of our technical knowledge and ability, our accurate and timely test reporting, the quality of our defect identification and ultimately with the value they see we add to the project.

- Outsourcing of test tasks or comprehensive product testing according to your requirements
- Guarantee of highly skilled resources
- Open communication, high visibility and on-going reporting
- Test philosophy that emphasises flexibility and adaptation to your software culture
- Functional, integration, system, SIT, UAT, automated testing

- Superannuation
- Federal Government
- State Government

## Methodologies

- Agile
- Iterative
- Waterfall
- Risk based
- Exploratory
- IEEE 829
- RUP

In some situations, the most important objective of testing is to find as many important bugs as possible. In other situations, finding bugs is not important at all. In yet other situations, bug-finding is only one of a number of important objectives. The wise test professional knows which situation she is in.
